

# JEREMY MART V. NAINGGOLAN

## SOFTWARE DEVELOPER

### PROFESSIONAL SUMMARY

A versatile and analytical Software Developer with proven experience in building responsive web applications and high-performance mobile applications. Proficient in PHP (Laravel), JavaScript, Dart (Flutter), and Java, with a strong track record of developing enterprise web admin dashboards and autonomous mobile solutions. Adept at managing full-lifecycle development, from UI/UX design to backend API integration. A collaborative team player dedicated to writing clean, scalable code and delivering seamless digital experiences across platforms.

### EXPERIENCE

#### Mobile Developer | 2025

PT. Indonesia AirAsia

- Refactored and optimized the Flutter mobile application (Airmaster) to enhance code quality, app performance, and long-term maintainability.
- Implemented GetX for efficient state management, dependency injection, and clean routing, resulting in a more responsive user experience.
- Improved and updated UI/UX mobile design to deliver a consistent, modern, and user-friendly interface for mobile users.
- Integrated mobile features with RESTful APIs developed in Laravel, ensuring seamless data synchronization between the app and backend.
- Migrated backend infrastructure to Google Compute Engine (GCP VM) to ensure high availability and scalability for the mobile app's data traffic.

#### Programmer | 2024

PT. Younexa Inti Materials

- Developed a dedicated Android application for warehouse management, streamlining real-time inventory tracking and order fulfillment processes.
- Integrated barcode scanning features and automated reporting within the Android app to speed up inventory control and eliminate manual errors.
- Designed and implemented a user-friendly mobile interface, significantly reducing the onboarding and training time for warehouse staff.
- Worked autonomously across all stages of mobile development, from UI design to final deployment and testing.

#### Chief of Education Division, Information System Student Association | 2024 - 2025

Del Institute of Technology

- Organized inter-faculty programming competitions and technical workshops to enhance practical coding and problem-solving skills among students.
- Mentored team members in leadership and project management within a collaborative technical environment.

### **Chief of Documentation Division, Study Orientation and Campus Introduction | 2023**

Del Institute of Technology

- Led a team of 2 members to document all activities during the week-long orientation program, ensuring complete coverage and high-quality media output.
- Coordinated with event organizers to capture key moments effectively, producing a comprehensive visual record of the event.
- Designed logos, graphics, and materials that represented the values and objectives of the orientation, ensuring that each design element carried meaningful symbolism.

### **Member of Documentation and Multimedia Division, Election Commission Committee | 2023**

Del Institute of Technology

- Assisted in creating multimedia content, including promotional materials and event recaps, to increase student awareness and participation in the election process.
- Worked collaboratively to design graphics and visuals that aligned with the commission's goals, maintaining consistent branding throughout the campaign.

### **Teaching Assistant for Visual Programming | 2023**

Del Institute of Technology

- Coordinated practical lab sessions for the Visual Programming course, guiding students in mastering core programming logic.
- Monitored student progress and provided individualized technical feedback to help them successfully complete their application projects.

### **Teaching Assistant for Computer Architecture and Organization | 2024**

Del Institute of Technology

- Assisted in conducting lab sessions, helping students understand critical low-level concepts including memory management and I/O systems, which are foundational for mobile performance optimization.

## **EDUCATION**

### **Del Institute of Technology | 2022 - 2026**

Information System

- GPA: 3.49/4.00

## **LANGUAGE**

- Indonesian
- English
- Batak Toba

## PROJECT

### Airmaster I Mobile Application

*PT. Indonesia AirAsia | 2025*

A cross-platform mobile application designed to streamline internal operational workflows and real-time data tracking for PT. Indonesia AirAsia. Built using Flutter and Dart, implementing GetX for state management, dependency injection, and clean routing. Refactored the core legacy code to improve performance and responsiveness, revamped the mobile UI/UX for a better user experience, and seamlessly integrated features with RESTful APIs.

### Airmaster Web Admin I Web Application

*PT. Indonesia AirAsia | 2025*

A web-based administration dashboard developed to manage backend data, user access, and configurations for the Airmaster ecosystem. Developed using PHP (Laravel), React, and SQL. Implemented full CRUD functionalities to ensure seamless data management and operational continuity that supports the main mobile application

### Warehouse I Android Application

*PT. Younexa Inti Materials | 2024*

A dedicated utility Android application built to optimize internal warehouse workflows, inventory tracking, and order fulfillment processes. Developed autonomously from scratch using Java/Android Studio. Designed a highly intuitive and user-friendly interface tailored for warehouse staff, and integrated automated barcode scanning features to speed up inventory control and minimize data entry errors.

### D'Mantis I Web Application

*PT. KPP Mining | 2024*

A specialized web application developed for PT. KPP Mining to support industrial operations and system tracking. Developed using CodeIgniter and MySQL. Worked collaboratively within a two-person development team to design efficient database tables, ensure data integrity, and implement backend system logic to deliver stable web operations.

### Facility Maestro I Web Application

*Course Project, Del Institute of Technology | 2024*

An academic web application project designed to automate facility booking and infrastructure management within the campus. Built using Laravel Framework and SQL. Collaborated within a team to build user-friendly interfaces, manage database queries for facility availability, and implement basic user authorization.

## SKILL

### Programming Language:

*Dart, Java, PHP, C, SQL*

### Frameworks & Libraries:

*Flutter, Laravel, RESTful APIs*

### Competencies:

*Mobile UI/UX Optimization, State Management,  
Barcode Scanning Ingegratrion, CRUD*

### Soft Skills:

*Leadership & Mentoring, Critical Thinking, Team  
Collaboration, Communication*
